

Water Impound Dye Blue Azul

Water Impoundment Dye Colorant

Blue Azul is a versatile, easy to use, non-toxic water impoundment dye colorant

Mixes Completely in water to prevent sunlight penetration

Blue Azul is a water impoundment colorant. It is safe to use in all water impoundments. It will not harm, fish or wildlife associated with water impoundments, safe to use treated water as irrigation source for all purposes. It should not be used in running or moving bodies of water due to dilution from standard use rates will significantly reduce efficacy of the product. Blue Azul reduces sunlight penetration into bodies of water and reduces and prevents weed and algae formulation in shallow bodies of water. It dyes the water a dark blue color.

Blue Azul Water Impoundment Dye

SHAKE WELL BEFORE USING

Quest Blue Azul water Impoundment Dye application rates will vary depending on water impoundment, depth and surface area. Optimal application rate is 1 gallon of Blue Azul per 4 acre feet of water impoundment. Treatment color will generally last 3 to 4 months depending upon rate used, intensity of sunlight, depth of impoundment and water movement.

SUGGESTED RATES:

Calculate the surface area of water impoundment to be treated and average depth and use 1 gallon per 4 acre foot of depth. Best results will be observed if impoundment to be treated is applied from several locations. If unable to treat from several locations, treat from location where wind actively moves surface water.

Based on currently available data, this product is not classified as a hazardous substance. However, observe good industrial hygiene practices. Wash hands after handling.
