

Odor Reduction Technology (ORT)

MISTY PRO“ORT” SPRAY ADJUVANT

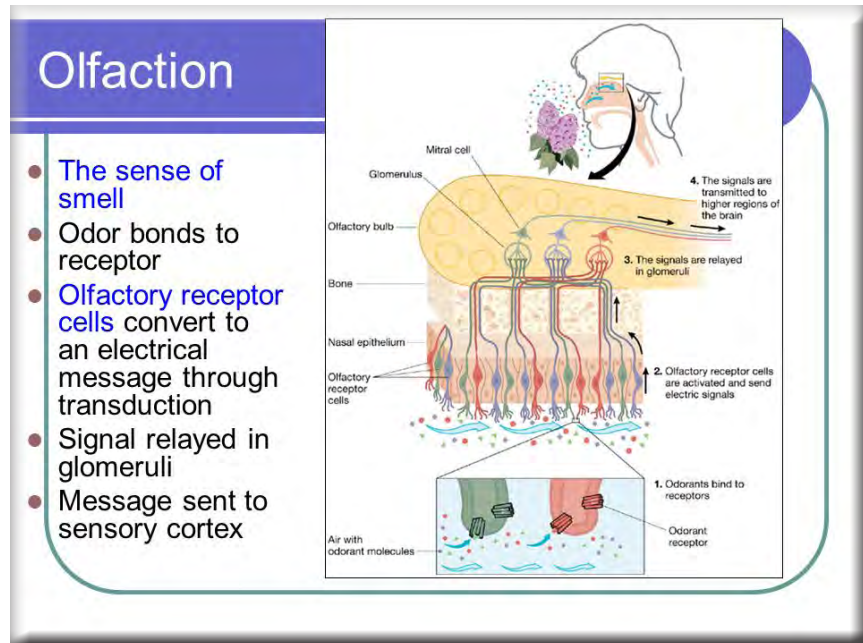

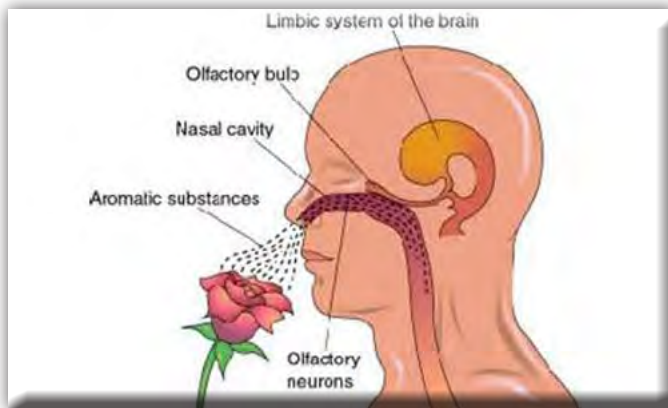

Misty Pro ORT is a highly concentrated spray adjuvant technology that greatly reduces the offensive odors of pesticides and other odors. It is designed to be added to the spray tank during mixing to reduce and mask odors during application. The Misty Pro ORT Technology combines with the pesticide to reduce objectionable odors and imparts a pleasant fragrance similar to that of fresh cut grass. Misty Pro with ORT improves pesticide performance by increasing; spreading, wetting, penetration and slowing dry time of the pesticide. The fragrance then remains for a short period of time until the pesticide odor has abated. Misty Pro with ORT is effective with and is compatible with all pesticide formulations today, EC, WP, SC, CG, OC and others.

How do we smell or perceive odor?

Misty Pro ORT technology bonds with the various pesticides in the spray tank prior to spray atomization. So that when the microscopic particle is inhaled, it bonds to the olfactory neurons before the pesticide odor bonds to the smell sensors.

DIRECTIONS FOR USE

Start with 2 pints of **Misty Odor Reducer** per 100 gallons of spray solution chemicals with objectionable odor. Fragrance intensity will vary with different chemicals. If additional masking is desired, slowly increase until satisfactory masking has been obtained.

IDEAL FOR

- Liquid or Wettable Powder Chemicals
- Masking objectionable smells
- Reducing applicator stress
- Large scale spraying near population
- Compatible with any spray application large or small

BENEFITS OF WETTING AGENT IN MISTY ORT

- Spreader
- Stickier
- Penetrator
- Wetting
- Humectant
