

QUEST FOAMING STAIN AND PIGMENT REMOVER

Many pesticides contain performance-enhancing green dyes that severely stain equipment, walkways, tee markers, concrete, statuary, and other items that can be difficult to remove. Fertilizer staining is also prevalent and difficult to remove. Quest Foaming Stain and Pigment Remover eliminates this problem.

The following photos are from a client that regularly sprays dye containing products. The staining is a few years old, and the customer has struggled to find a product to clean it effectively. With Quest Foaming Stain and Pigment Remover, it was truly a spray-on and wipe-off process!
